

**A Nespresso Saga** *continued from page 1*

which we've returned using their pre-paid, printable UPS labels, we now have the correct machine as well as some extra pods of our favorite coffees.

We all know times are tough, but it's nice to know if we persist, we can find joy and "wake up and smell the coffee"!

**Aaron's Answers** *continued from page 1*

thing, houses in Utah get hardly any plain water. Every house has a saltwater generator that softens the calcium and magnesium-rich hard water, but that soft water is unpleasant to drink. So, every house also has a reverse osmosis system, which removes the salt from the water, and supplies clean drinking water to a water appliance of your choice. Almost everyone chooses to send this drinking water to their fridges, which dispense the water when pressed against with a bottle. However, I have been enjoying the winter season a lot. There's enough snow sometimes to go sledding or skiing, and it makes it all the more pleasant to sit in front of a warm heater afterward. I hope everything is going well in California!
